Education

Lovely Professional University

July 2019 - May 2023

Bachelor of Technology in Computer Science Engineering

Punjab, India

Technical Skills

Languages: Python, GO, C++.

Technologies/Frameworks/Libraries: Data Structures and Algorithm, SQL, Django, Django RestFramework, RestFramework, Postgres, Rest APIs, AWS Lambda, Kafka, Celery, Jenkins, Git, GRPC, RAG, LLMs

Experience

PAZY

JAN 2026 – Present

Software Engineer

Bangalore, India

- Reduced infrastructure costs by **40%** through architecture and resource optimization, significantly lowering the company's cloud expenditure.
- Developed a high-impact feature that was adopted by **280+ users within the first hour** of release, driving rapid user engagement.
- Designed and implemented a **role-based reminder and notification system** to automate user-specific alerts and workflows.
- Optimized API performance by offloading long-running tasks to **background jobs**, improving response times and system scalability.

VapusData

May 2025 – DEC

Founding Engineer

Bengalore, India

- Worked extensively on **backend development** using **Go and GRPC**, building scalable and secure RESTful APIs and AI Agents.
- Designed and implemented a robust **OCR service** capable of extracting structured text from images and scanned documents, improving data intake efficiency.
- Implemented a **semantic and vector search engine** using Qdrant, enabling high-performance similarity searches across unstructured data.
- Created specialized **verticals** (domain-specific modules) tailored to customer use-cases, improving modularity and product flexibility.

Scale AI

August 2024 – May 2025

Software Developer / AI Engineer

Remote, India

- Trained and fine-tuned multiple AI/LLM models** on large-scale datasets to improve task-specific performance, accuracy, and overall model robustness.
- Successfully **fine-tuned Meta's LLaMA model** for domain-specific tasks, optimised inference speed and enhanced accuracy using supervised and reinforcement learning techniques.
- Trained and optimised an internal **debugger model by Meta (Facebook)**, improving its prediction accuracy and stability through RLHF (Reinforcement Learning from Human Feedback).

Projects

AI-BrowserAutomation | Python, FastAPI, OpenAI, Browser-Use

- Developed an intelligent **AI-driven browser automation agent** capable of autonomously performing tasks like sending emails, applying to jobs on LinkedIn, and managing Gmail through natural language prompts.
- Integrated **OpenAI's GPT models** to interpret user intent and generate real-time step-by-step browser automation workflows.
- Optimized performance by introducing asynchronous task handling and improved context parsing for longer workflows.

Blog Dashboard | Python, Django, DRF

- Designed and built a complete blog management platform featuring CRUD operations and intuitive user workflows.
- Implemented REST APIs using **Django Rest Framework**, ensuring scalable and efficient data handling.
- Enhanced user experience through clean API structure and modular backend architecture.
